Chapter 1

Exercise 10: Parallel Steiner Tree Heuristic

Extend exercise 9 such that it can be run in parallel (shared memory, e.g. OpenMP for C/C++). Furthermore, extend your program such that it tries each of the *****first 100 terminals***** as starting points for the Steiner tree heuristic and keeps the best result. Your program should be executable as follows:

- prog <file.gph>

It should print the objective value (weight) of the best found Steiner tree, for instance

- Obj: 664

*****Please note that this is the last exercise of the lecture and that it will play a major role in the final grading*****

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

graph	7
---------------------------------	---

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

ex10.c	A program for APPFS ex10	11
ex10.h	Definitions for APPFS ex10	13

Chapter 4

Class Documentation

4.1 graph Struct Reference

```
#include <ex10.h>
```

Public Attributes

- long long int [number_of_nodes](#)
- long long int [number_of_edges](#)
- long long int [count](#)
- long long int [sum](#)
- long long int * [number_of_neighbours](#)
- long long int * [index_of_first_neighbour](#)
- long long int * [sorted_heads](#)
- long long int * [sorted_weights](#)
- long long int * [tail](#)
- long long int * [head](#)
- long long int * [edge_weight](#)
- long long int * [tree_pred](#)
- long long int * [predecessor](#)
- long long int * [distance](#)

4.1.1 Detailed Description

the graphs attributes

4.1.2 Member Data Documentation

4.1.2.1 long long int graph::count

number of terminals added to subtree

4.1.2.2 long long int* graph::distance

the distance of each vertex from source

4.1.2.3 long long int* graph::edge_weight

the weight corresponding to each edge

4.1.2.4 long long int* graph::head

the head corresponding to each edge

4.1.2.5 long long int* graph::index_of_first_neighbour

index of first neighbour for each vertex

4.1.2.6 long long int graph::number_of_edges

number of edges in the graph

4.1.2.7 long long int* graph::number_of_neighbours

number of neighbours for each vertex

4.1.2.8 long long int graph::number_of_nodes

number of vertices in the graph

4.1.2.9 long long int* graph::predecessor

the predecessor of each vertex in shortest path tree

4.1.2.10 long long int* graph::sorted_heads

heads of each edge sorted by vertex

4.1.2.11 long long int* graph::sorted_weights

weights of each edge sorted by vertex

4.1.2.12 long long int graph::sum

sum of weights in subtree

4.1.2.13 long long int* graph::tail

the tail corresponding to each edge

4.1.2.14 long long int* graph::tree_pred

the predecessor of each vertex in steiner tree

The documentation for this struct was generated from the following file:

- [ex10.h](#)

Chapter 5

File Documentation

5.1 ex10.c File Reference

A program for APPFS ex10.

```
#include <assert.h>
#include <ctype.h>
#include <limits.h>
#include <math.h>
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <sys/time.h>
#include <time.h>
#include <omp.h>
#include "ex10.h"
```

Include dependency graph for ex10.c:

Macros

- `#define EXT_SIZE (1024*1024)`
- `#define MAX_LINE_LEN 512`
- `#define INTEGER long long int`
- `#define INTEGER_MAX LLONG_MAX`
- `#define error_exit(msg) error_exit_fun(msg, __FILE__, __LINE__)`

Functions

- void `error_exit_fun` (const char *const msg, const char *const file, const INTEGER lineno)
- int `sift_up` (INTEGER *heap, INTEGER *distance, INTEGER *index, INTEGER current)
- int `sift_down` (INTEGER *heap, INTEGER *distance, INTEGER *index, INTEGER current, const INTEGER size)
- int `steiner` (struct `graph` *G, struct `graph` *H, INTEGER *is_prime, INTEGER source)
- INTEGER `get_primes` (INTEGER *is_prime, INTEGER max)
- int `main` (int argc, const char *const *const argv)

5.1.1 Detailed Description

A program for APPFS ex10.

Author

Tri-Peter Shrive

5.1.2 Function Documentation

5.1.2.1 void error_exit_fun (const char *const *msg*, const char *const *file*, const INTEGER *lineno*)

utility function that simplifies error handling

Parameters

<i>msg</i>	message to be displayed
<i>file</i>	file name
<i>lineno</i>	line number

5.1.2.2 INTEGER get_primes (INTEGER * *is_prime*, INTEGER *max*)

sets entry at index of prime numbers to 1

Parameters

<i>is_prime</i>	allocate memory for this array of size max and set the memory to zero
<i>max</i>	size of array is_prime, the largest number to be assessed for primality

5.1.2.3 int main (int *argc*, const char *const *const *argv*)

reads data from file storing nodes and weights in graph structure. then calls dijkstra's algorithm and assesses longest shortest path

5.1.2.4 int sift_down (INTEGER * *heap*, INTEGER * *distance*, INTEGER * *index*, INTEGER *current*, const INTEGER *size*)

sifts an entry down through binary heap

Parameters

<i>heap</i>	nodes in heap
<i>distance</i>	distance of nodes in heap
<i>index</i>	index of nodes in heap
<i>current</i>	current position of node in heap
<i>size</i>	size of heap

5.1.2.5 int sift_up (INTEGER * *heap*, INTEGER * *distance*, INTEGER * *index*, INTEGER *current*)

sifts an entry up through binary heap

Parameters

<i>heap</i>	nodes in heap
<i>distance</i>	distance of nodes in heap
<i>index</i>	index of nodes in heap
<i>current</i>	current position of node in heap

5.1.2.6 `int steiner (struct graph * G, struct graph * H, INTEGER * is_prime, INTEGER source)`

calculates steiner tree for given graph and source terminal using dijkstra's algorithm

Parameters

<i>G</i>	static graph attributes
<i>H</i>	variable graph attributes
<i>is_prime</i>	array where entries are 1 when index is prime
<i>source</i>	source node

5.2 ex10.h File Reference

Definitions for APPFS ex10.

This graph shows which files directly or indirectly include this file:

Classes

- struct [graph](#)

Functions

- void [error_exit_fun](#) (const char *const msg, const char *const file, const long long int lineno)
- int [sift_up](#) (long long int *heap, long long int *distance, long long int *index, long long int current)
- int [sift_down](#) (long long int *heap, long long int *distance, long long int *index, long long int current, const long long int size)
- int [steiner](#) (struct [graph](#) *G, struct [graph](#) *H, long long int *is_prime, long long int source)
- long long int [get_primes](#) (long long int *is_prime, long long int max)

5.2.1 Detailed Description

Definitions for APPFS ex10.

Author

Tri-Peter Shrive

5.2.2 Function Documentation

5.2.2.1 void [error_exit_fun](#) (const char *const *msg*, const char *const *file*, const long long int *lineno*)

Parameters

<i>msg</i>	message to be displayed
<i>file</i>	file name
<i>lineno</i>	line number

5.2.2.2 long long int [get_primes](#) (long long int * *is_prime*, long long int *max*)

sets entry at index of prime numbers to 1

Parameters

<i>is_prime</i>	allocate memory for this array of size max and set the memory to zero
<i>max</i>	size of array <i>is_prime</i> , the largest number to be assessed for primality

5.2.2.3 `int sift_down (long long int * heap, long long int * distance, long long int * index, long long int current, const long long int size)`

sifts an entry down through binary heap

Parameters

<i>heap</i>	nodes in heap
<i>distance</i>	distance of nodes in heap
<i>index</i>	index of nodes in heap
<i>current</i>	current position of node in heap
<i>size</i>	size of heap

5.2.2.4 `int sift_up (long long int * heap, long long int * distance, long long int * index, long long int current)`

sifts an entry up through binary heap

Parameters

<i>heap</i>	nodes in heap
<i>distance</i>	distance of nodes in heap
<i>index</i>	index of nodes in heap
<i>current</i>	current position of node in heap

5.2.2.5 `int steiner (struct graph * G, struct graph * H, long long int * is_prime, long long int source)`

calculates steiner tree for given graph and source terminal using dijkstra's algorithm

Parameters

<i>G</i>	static graph attributes
<i>H</i>	variable graph attributes
<i>is_prime</i>	array where entries are 1 when index is prime
<i>source</i>	source node
